Hydration state	Mg	Ca	Fe	Na
Anhydrous	Anhydrous Mg-Sulfate	Anhydrite	--	Thenardite
1/2 H ₂ O	--	Bassanite	--	--
1 H ₂ O	Kieserite	--	Szomolnokite	--
2 H ₂ O	Sanderite	Gypsum	--	--
3 H ₂ O	Mg-sulfate tri-hydrate	--	--	--
4 H ₂ O	Starkeyite	--	Rozenite	--
5 H ₂ O	Pentahydrate	--	--	--
6 H ₂ O	Hexahydrate	--	--	--
7 H ₂ O	Epsomite	--	Melanterite	--
10 H ₂ O	--	--	--	Glauber's salt
11 H ₂ O	Meridianiite	--	--	--

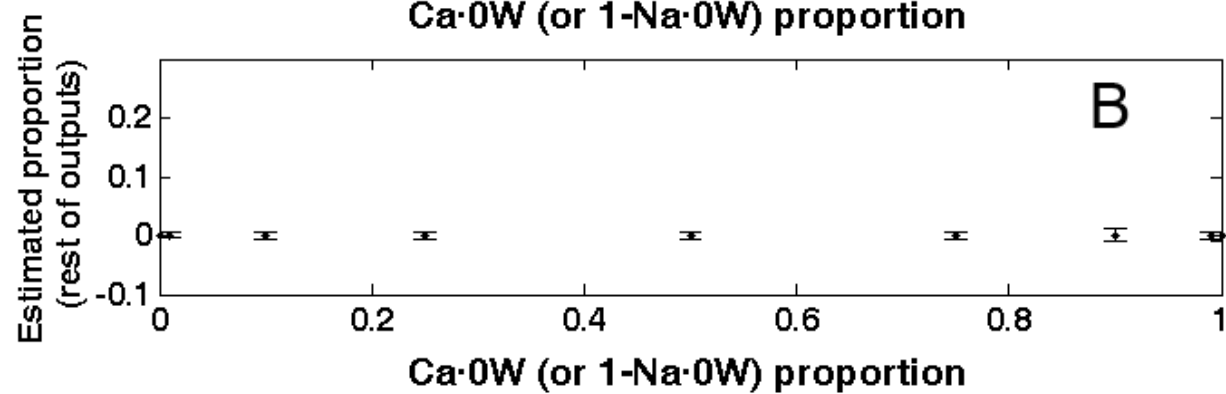

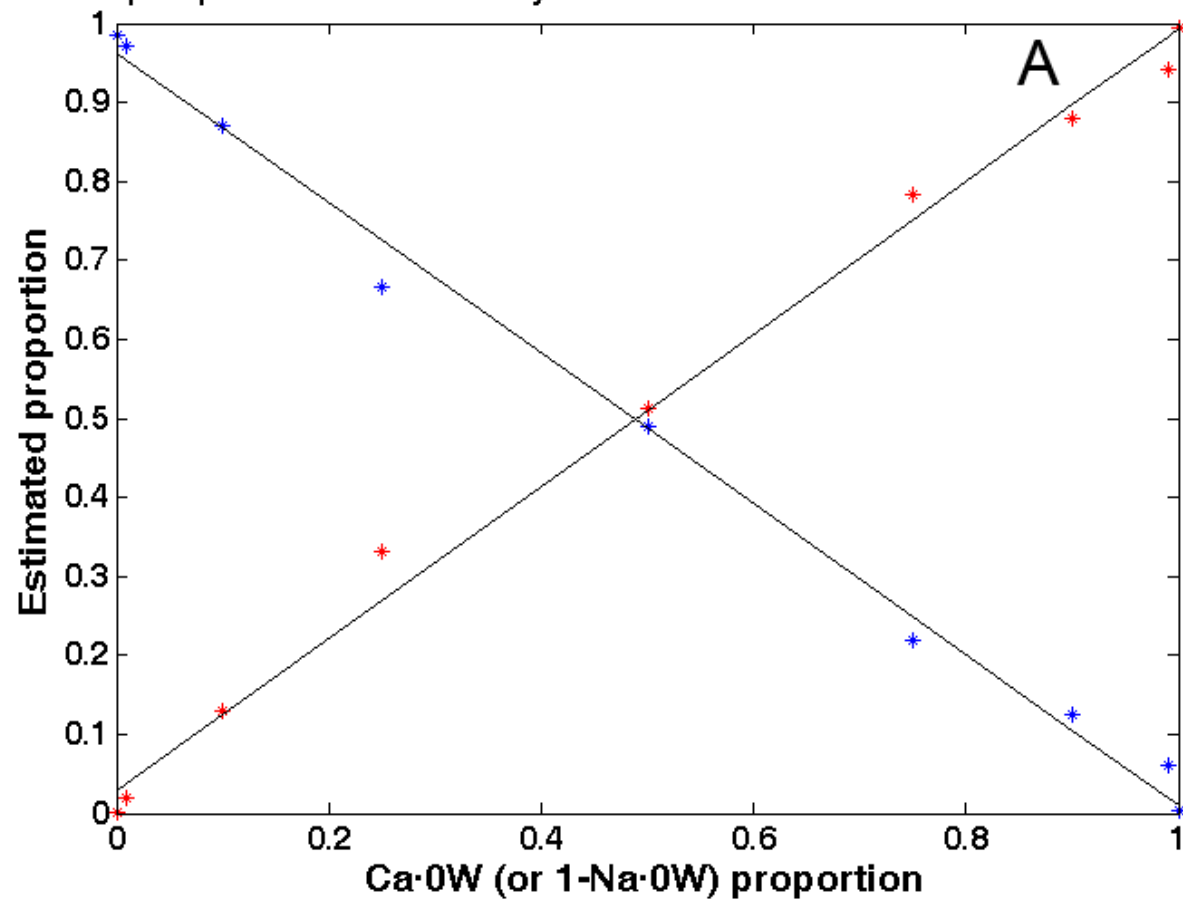

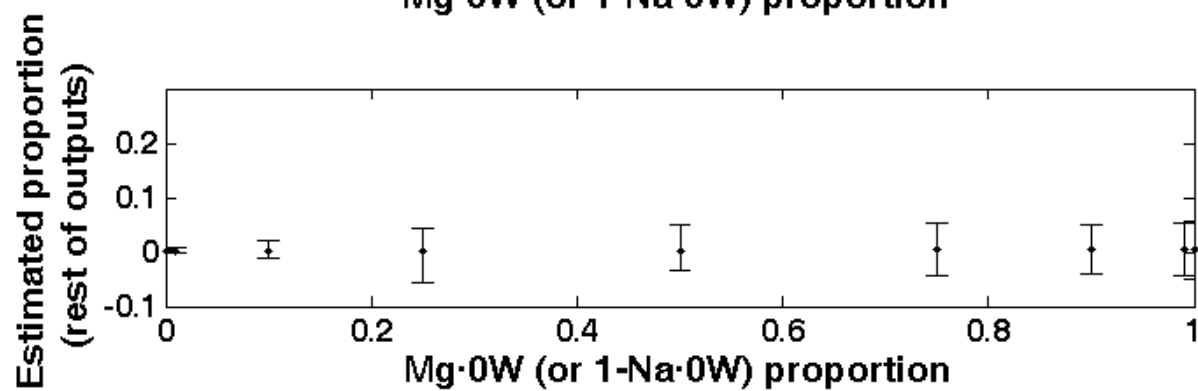

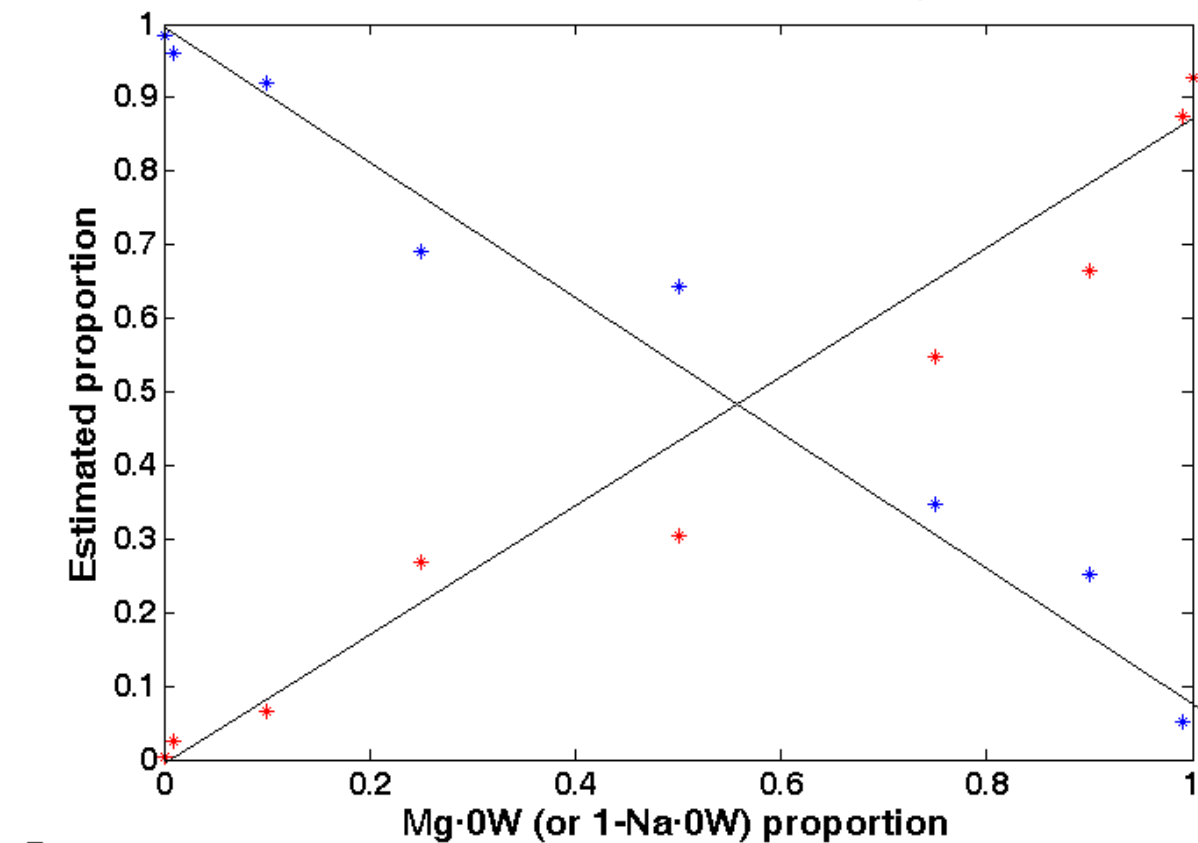

Network outputs for mixtures in several proportions of Anhydrite + Thenardite from RLS

Network outputs for mixtures in several proportions of Thenardite + Anhydrous MgSO_4 from RLS

Multivariate Analysis Summary

- Need to analyze **several thousands** of variables at the same time
- PCA and PLS calculate **principal components**
- ANNs use **non-linear** transfer functions
- PCA **separates** low- from high-hydrated sulfates
- PLS model outputs presented **good correlations** to the known responses
- ANN provides the **abundance** of the corresponding salt (**100%** accuracy)

Data Fusion

Data Fusion

DATA FUSION IN PLANETARY LIBS+RAMAN SPECTROSCOPY

- A set of 9 binary mixtures of MgSO_4 and NaSO_4
- Collocated LIBS and Raman spectra recorded
- Low-level fusion
- 3 PCA models trained and validated
